

CORPORATE POLICY · JULY 2026

Safety Statement

Corporate policy governing safety practice across all WolfPro operations

////// STATEMENT OF PRINCIPLE

WolfPro Engineering & Land Surveying Inc. operates across Western Canada, from urban construction sites to remote well pads, winter access roads, and industrial facilities. The environments we work in demand discipline, training, and a culture where every team member is empowered to speak up, slow down, or stop work when conditions require it. Safety is not a department at WolfPro. It is how we do the work.

Everyone goes home at the end of the day. That is the standard we are built on, and the measure by which every decision on every site is made.

////// OUR COMMITMENTS

1. Maintain COR certification

WolfPro maintains Certificate of Recognition (COR) status through regular internal and external audits, ensuring our health and safety management system meets the standards required by provincial regulators and industry clients.

2. Train, equip, and qualify every team member

Field and office staff receive the training, certifications, and personal protective equipment appropriate to their role, including first aid, ground disturbance, fall protection, confined space, UAV operations, and site-specific orientations.

3. Plan the hazard out of the work

Every project begins with a hazard assessment. Field Level Risk Assessments (FLRAs) are completed before work starts on site, and controls are reviewed as conditions change, because the North rarely stays the same for long.

4. Empower stop-work authority

Any employee, subcontractor, or client representative on a WolfPro site has the unconditional authority, and the expectation, to stop work when a hazard is unaddressed. No task is so urgent it cannot be done safely.

5. Report, investigate, and learn

Incidents, near-misses, and hazard observations are reported openly and without blame. Root causes are investigated, controls are updated, and lessons learned are shared across the company so the same risk is not carried to the next project.

6. Protect the public and the environment

Our safety responsibility extends beyond our own crews. We plan traffic control, ground disturbance, and field operations to protect the public, neighbouring workers, and the land we work on.

"Safety is not the price of doing the work. It is the proof of doing it well."

— WOLFPRO ENGINEERING & LAND SURVEYING INC.
